
limit cycle
small droplet, 0.25×
pre-phosphorylated, $p = 0.4$
kinase in dilute phase
three droplets
restart at cycle minimum
a
$(N_k, N_p) = (2, 10)$
$(N_k, N_p) = (2, 12)$
$(N_k, N_p) = (3, 12)$
$(N_k, N_p) = (3, 15)$
$(N_k, N_p) = (3, 18)$
$(N_k, N_p) = (4, 20)$
N_{cond}
mean pSer per chain
b
period
mean pSer
pSer amplitude
deviation from slab start (%)
